

The **ascom** Berkshire SD4 RD
Telephone – *for restricted dialling
applications*

The Berkshire SD4 RD Telephone – *helps you take control*

The Ascom Berkshire SD4 RD has been specially designed with four memory keys, in place of a standard number keypad, for customers requiring restricted dialling applications. This makes the **Berkshire SD4 RD** an ideal choice where it is desirable to limit call access from a particular telephone, whilst ensuring the calls are directed to specific areas.

Controlled Access

The **Berkshire SD4 RD** has four pre-programmable one-touch memory keys, which can be factory programmed if required. As the Ascom Berkshire SD4 RD does not have a standard keypad, you can control the call access allowed from a particular handset, by giving the user a limited selection for the destination of their call.

The **Berkshire SD4 RD**, makes an ideal choice for customers such as airports, hotels, banks and stores and at customer help points, in lifts or in unmanned reception areas, anywhere in fact, where it is advantageous to direct calls to particular numbers.

Whether it is to connect to a PBX or to Direct Exchange Lines, the **Berkshire SD4 RD** is a reliable option you cannot afford to ignore.

Badging

As with all the telephones in the **Berkshire** range, the **Berkshire SD4 RD** can be silk screen printed with your logo and feature codes according to your requirements. We have a team of specialists available to advise on this service and to help with artwork.
