

KT 3

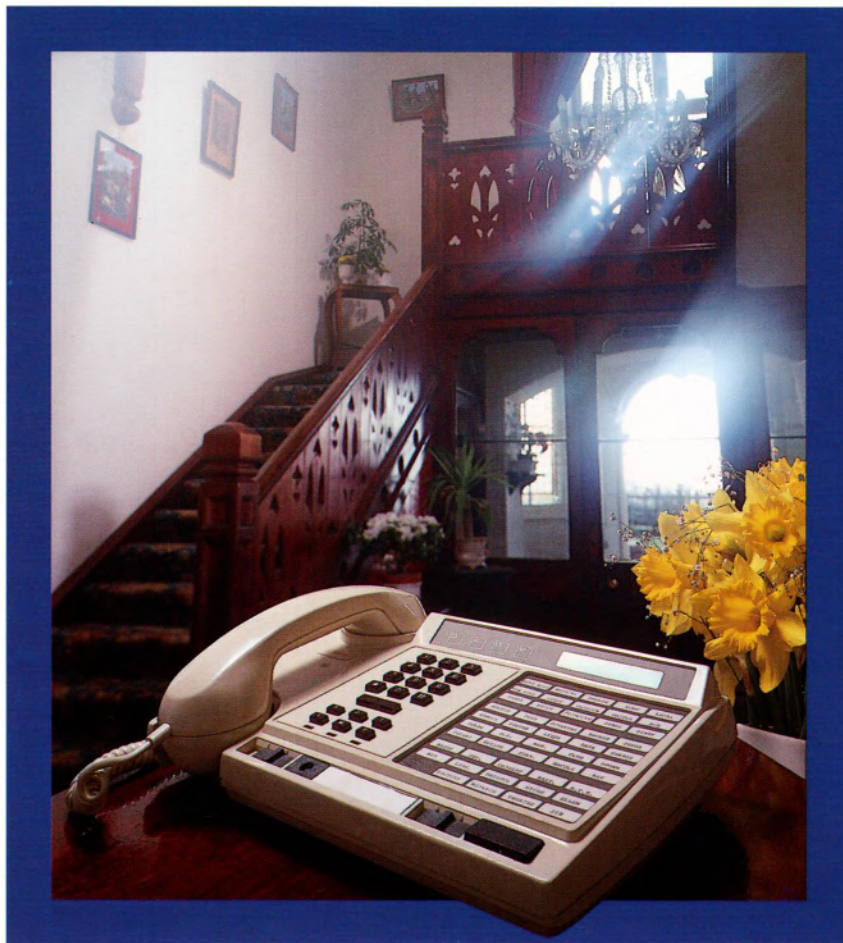

is available in four different versions — two for direct connection to a Philips or any other PABX, and two for use as planset extension with Philips KBX3 & 6 electronic telephone systems.

PHILIPS

KT3

Manufactured in four versions

Two versions for PABX extensions

Two versions for Philips KBX3 & 6 planset extensions

On-hook dialling on two models

Full handsfree operation on two models

Attractively styled to match modern office decor

Choice of colours

Maximises Business Efficiency Right around the Office

When you choose the KT3 featurephone everyone appreciates its sophisticated 'director-level' styling! Already operating in a wide range of different types of offices, the Philips KT3 offers many outstanding features and facilities. It's also ideal for the larger private residence which requires a range of sophisticated facilities.

Four versions

- PABX extension.
- PABX extension with full handsfree operation.
- Planset extension with on-hook dialling.
- Planset extension with full handsfree operation.

Both of the PABX versions can be used with Philips or a wide range of other PABXs, but those for use as planset extensions are designed specifically for operation with the Philips KBX3 & 6 electronic keysystems.

Autodialling

KT3 offers single button calling based on dial tone detection — a more certain technique than the usual pause method, which is also available if required. All stored numbers can include dial tone detects, pauses and recall mixed with the digits to ensure single-button access to external numbers via the PABX together with all PABX features.

Planset version

This version of KT3 exploits the capability of the Philips KBX3 & 6 electronic keysystems and provides direct intercom, three-party conversation and automatic divert.

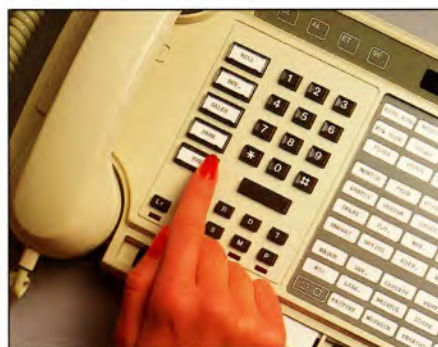

Handsfree operation

Here's a very useful feature, especially where you need to take notes or refer to documents or in an office where several people need to take part in your conversation. Also known as a 'loudspeaking' facility handsfree operation enables all incoming and outgoing calls (via exchange lines or the internal telephone network) to be set up without lifting the handset. And conversations can be held in the same way. But if users prefer to talk more privately they may do so at any time, simply by picking up the handset.

On-hook dialling

That's right — without lifting the receiver, you can dial any internal or external number you wish! Simply pick up the handset when you hear the called party answer.

More Features and Facilities for Extra Efficiency

Repertory calling

Full 49 number capacity
Individually named store locations on touch-sensitive pad provide for any combination of:

- External numbers. Particularly useful for IDD and DDI calls with 28 digit capacity including dial tone detects and pauses.
- Internal numbers.
- PABX facility codes. Recall storage ensures that all facility codes can be stored for access by a single button press.

Non-volatile store

In the event of power failure, there's no need to worry about your stored numbers — because the Philips KT3 incorporates a special type of memory (EAROM — for the technically minded), which retains the numbers indefinitely even when the power is off.

Redial last number

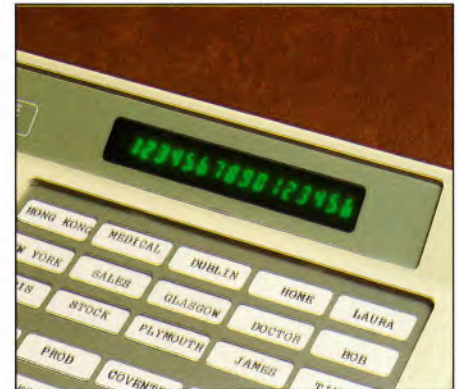

There's a dedicated button which allows the user to redial the last dialled number — and it doesn't matter whether the called party answered the telephone or not. If you need to, you can redial the same number as many times as required.

Microchip technology

Incorporating advanced microchip circuitry to provide users with a highly reliable, modern telephone instrument.

Storable recall

Single button call transfer to stored internal extension numbers, also enables storage of PABX facility codes requiring recall for single button access. This ensures maximum use of modern PABX features.

16-digit display

Clear, bright fluorescent green display shows: numbers stored, called and keyed; the time on a 12-hour clock; an alarm setting; and the duration of calls or other events in minutes and seconds.

Noteпад

Access to the store enables numbers to be displayed or new numbers to be entered even during a call; useful for passing on numbers and keeping new numbers during a call — no more scraps of paper to lose!

Brief specification

- Plug-selectable LD/MF signalling.
- Plug-selectable EL/TB (70ms or 600ms) recall.
- Choice of colours: stone, beige and light grey
