MITEL

SMarT-1™ Euro ISDN Primary Rate Dialer Range

Until now, acquiring a new subscriber meant reprogramming a PBX. This requires your engineers to understand every make and model of PBX on the market today. Problems with reprogramming can often result in demarcation disputes with the PBX maintainer, whilst choosing to use them means you lose control over the time schedules. Mitel's SMarT-1™ Primary Rate dialer range allows your chosen engineer to connect a customer every time, irrespective of the equipment. Which means you're in control and receiving call traffic at the earliest opportunity.

	PRA x 1(A)	PRA x 1	PRA x 1 (DASS2)
Part number*	8390-401	8390-400	8390-210-3xx
No. of channels	30 x 64k	30 x 64k	30 x 64k
No. of carriers	50	50	50
No of 8 digit routing prefixes	6,000	6,000	6,000
AOC	Flexible	Flexible	DASS2 specific
CDR	Yes	Yes	Yes
Tone detection	Yes	No	Yes

* UK variants end with - 3xx

Features of the Primary Rate Range

- Range includes the first dialer for access to voice and data traffic for DASS2.
- Target corporate accounts where e-mail, web-browsing and international calls create high volumes of voice and data traffic for your network.
- Improves customer loyalty - our research shows 80% of your customers forget to dial your network prefix.
- Avoids costly upgrades of software on older PBX's which are unable to route local calls over indirect.
- Call Home enables you to detect inactivity, and therefore potential zero-billing.
- Manage customer base reprogramming with the Routcenter management system and dialer Call Home.
- Target customers with lower call spends and obtain a quick payback on your investment, thanks to revised ISDN pricing.
- Can be reprogrammed for re-use on a new customer site.
